GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS JOE D. TANNER, COMMISSIONER

VOLUME XV, NUMBER 8
(August 1989 data)

Employment changes little from July

Nonagricultural wage and salary employment rose a mere 1,700 from July, almost all of it in nonmanufacturing industries. The only gains of any consequence occurred in the government and services divisions. Trade had the only significant decline.

The picture from July 1988 was quite different. Construction, manufacturing, and mining declined while the remaining industry divisions posted gains ranging from a modest 700 in transportation and public utilities to 23,500 in services.

Manufacturing employment totalled 565,600 in July, only 200 more than in June 1989 and 5,000 less than in July 1988. All of the over-the-month fluctuations were minor, but some significant changes occurred from last year. For example, transportation equipment employment dropped 2,300, most of it in aircraft assembly. Automobile assembly plants recorded an increase; however, it is destined to be short-lived because of General Motors' recently announced plans to close the Lakewood assembly plant. The remaining segments of the transportation equipment industry (which includes buses, trucks, boat building, and ship repair) recorded a decline of 700.

Lumber and wood products also posted an employment decline from last July. Logging camps, sawmills, and planing mills dropped 400, and millwork and prefabricated wooden products declined by 500.

Stone, clay, glass, and concrete products was down by 1,100 from last year. As the manufacture of cement, concrete products, and brick fall under this industry, there is a direct correlation between employment in stone, clay and glass and in the construction industry.

Employment in the apparel industry declined by 2,300 from last year. This industry continues to suffer from competition from cheaper foreign goods. Recent figures reveal that more than half of all garments sold in the United States are imported, mainly from the Far East. Technological advances, including a

Continued

New developments

Rockwell International Corporation has announced further layoffs at its Duluth Missile Systems Division because of cutbacks in federal defense spending. The company has also lost some contracts to competitors. Company officials declined to say how many people would lose their jobs except to characterize the layoff as "small." About 200 jobs were eliminated earlier this year.

General Motors Corporation has made the long-expected announcement that it will close the Lakewood assembly plant in March of next year, idling an additional 2,200 people. About 1,000 Lakewood employees have already been laid off as a result of slumping sales of the Chevrolet Caprice and Buick Estate Wagon. Although GM officials do not rule out future production with a different model, industry analysts doubt that the aging facility will reopen because of the drop in the company's market share of domestic sales. Displaced employees will be able to draw up to 90 percent of their wages for about a year, plus being eligible for unemployment insurance benefits and retraining assistance.

Bank South Corporation will eliminate some 300 jobs representing about 10 percent of its work force by the end of the year, according to a company spokesman. The bank expects to make most of the cut through attrition, he said, but there will be some layoffs. No decision has yet been made about what positions will be affected, but most of the cuts are expected to come in the middle management, staff, and clerical areas.

Lechmere Inc. reportedly will close all of its stores in the Southeast, including four in the metropolitan Atlanta area. Lechmere was recently sold by its financially strapped parent company, Dayton Hudson Corporation, to a Boston-based investment group. The new owners are expected to close the Southeastern stores because, like the Branden's houseware stores that were closed earlier in the year, Lechmere has not achieved what the owners consider an acceptable rate of return on investment. The four Atlanta-area stores employ a total of approximately 600 people.

Employment changes little from July

Continued

machine that detects skipped stitches, may significantly increase the quality and productivity of the American garment industries, but improved technology is not without its downside with regard to jobs. The more highly automated the plant, the fewer employees are required to operate the equipment. Although the operative jobs will not require a great deal of expertise, highly skilled people will be required to maintain the equipment. Small firms will not be able to afford the capital investment, and some will go out of business while others will be forced to merge with larger companies.

Construction dropped 600 from last month and 7,200 from August 1988. Only general building increased from July, and all segments declined from last year.

Transportation and public utilities employment fluctuated considerably, but increased 700 over the year. The transportation sector had the most significant changes. Airline employment dropped 2,600, and railroads declined 400, while motor freight transportation rose 2,500; local, suburban, and interurban transportation; and transportation services each went up 500.

Wholesale and retail trade declined over the month because of less activity in retail establishments and wholesale durable goods. From last year, however, the trade industries rose by 16,400 because of more business in almost every segment.

Finance, insurance, and real estate employment was up 1,700 from last year, most ot it in the insurance industry.

Services rose slightly over the month and a substantial 23,500 from last year. Almost all the service industries shared in the growth. Business services was a surprising exception, declining 500 from the same month a year ago.

Government employment increased by 1,800 from July and 1,700 from August 1988. The monthly gain was almost entirely in local education as some 9-month employees returned to prepare for the opening of school. The annual increase was shared by all segments of government.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR | LABOR INFORMATION SYSTEMS | JOE D. TANNER, COMMISSIONER

VOLUME XV, NUMBER 9
(September 1989 data)

Employment up in government, manufacturing

Georgia's nonagricultural wage and salary employment rose 6,200 from August, mostly because of the reopening of schools and the recall of automobile assembly workers from a layoff. From September 1988, employment went up 36,200. The annual increase was shared by all segments except manufacturing, construction, and mining.

Contract construction employment dropped from both reference periods. Heavy building and special trades contracting slipped both over the month and over the year. General building diminished by 500 from August, but rose 300 from September 1988.

Manufacturing rose 2,500 from last month, most of it in transportation equipment. The increment was no true gain; rather it reflected the return from layoff in one automobile assembly plant. That sector still has 1,300 fewer employees than were working last year.

From September 1988, manufacturing employment fell 5,100. Apparel and other finished textile products was the largest loser, sliding by 3,400. Yarn and thread mills slipped 1,100; stone, clay, and glass, 1,100; and lumber and wood products, 800.

Food and kindred products registered the largest gain in the manufacturing group: 1,700. Some 1,300 of these jobs occurred in poultry dressing and poultry processing. Bakery products advanced by 400 from last year. This segment should continue to thrive during the coming months, as the holidays always create a greater demand for baked goods.

Employment in transportation and public utilities realized an increment of 1,000 from August and 1,100 from September 1988. Almost all of the addition was in commercial air lines.

Although wholesale and retail trade grew by 8,400 over the year, the division lost 1,800 over the month. Department store employment, which normally rises from

Continued

New developments

Sears, Roebuck and Company will move its credit operations to a new building to be constructed in Northlake Office Park. Presently housed in two locations, Ponce de Leon Avenue and Hugh Howell Road, the credit facility will expand from its current combined total of 530 employees to 900, according to a company spokesman.

Scientific Games, Inc., a subsidiary of Bally Manufacturing Corporation of Chicago, will build a new plant in Forsyth County. The 120,000-square-foot facility will cost $18 million and will be used to produce lottery tickets. The Atlanta offices will be relocated to the new building and some employees will be transferred to Georgia from California and Illinois. About 250 new jobs will be created, according to a company spokesman.

AT&T will lay off 100 workers at its Norcross copper cable and fiber optics plant, it was announced recently. Personnel to be affected are production and maintenance workers. Some 60 management personnel were terminated in June. A spokesman said the layoff resulted from diminished demand for copper cable and fiber.

WCI Microwave Inc. has announced the layoff of 200 of its 800 workers from its Dalton plant effective at the end of October. A company spokesman blamed the layoff on the seasonal slowing of orders.

Employment up in government, manufacturing

Continued from page 1

August to September because of back-to-school clothing sales, went up only 100 this year as retailers show greater-than-usual caution in their hiring.

Employment in eating and drinking places declined for the third straight month, dropping by 1,800. The industry, which has been one of the fastest growing for some time, rose by only 100 from last year, indicating that the market may finally be reaching the saturation point.

Finance, insurance, and real estate dropped 900 over the month and rose 700 over the year. All of the monthly loss occurred in the financial sector, mostly because of the termination of temporary employees hired for the summer. The industry dropped by 700 from September 1988, because of the effects of consolidation and cost-cutting measures. The only substantial over-the-year growth occurrred in the insurance sector. Real estate employment dropped 400 from last month, reflecting the softening of the real estate market statewide, but especially in the larger metropolitan areas.

A normal seasonal downturn in hotels and motels and recreation and amusements drove employment down in the service industries this month. Annually, the division gained 17,900, more than half of it in business and health services.

The gain in government employment was entirely due to local education as schools closed for the summer experienced normal reopenings. Because state schools normally have later opening dates than local systems, state education dropped from August. Part time summer jobs end, in many cases, before the school year begins with its attendant new hires. Federal employment dropped because of layoffs at the Internal Revenue Service, and local governments also terminated a large number of summer employees. Every sector of government shared in the yearly growth.

New developments

Continued from page I

American Telephone and Telegraph Company will expand its Atlanta-based Material Management Services plant, making it the company's repair center for residential telephones, voice terminals, and small business telephone systems, according to a company spokesman. AT&T will close its telephone equipment repair operations in King of Prussia, Pa. A number of the affected positions will be transferred to Atlanta, and the remainder will move to Chicago. As a part of the reorganization, distribution services currently handled in Atlanta will be moved to Montgomery, Alabama. About 200 positions will be added in Atlanta, some of which are expected to be filled by transfers from the Pennsylvania facility.

Mobile Chemical Company, a division of Mobil Corporation, has announced plans to build a 250,000-square-foot plant in LaGrange where polypropylene film will be produced. Construction will begin shortly, and the facility is expected to begin production during the latter part of 1991. About 280 people will be employed, and most of them will be hired locally.

Goody Products, Inc. will move the operations of its Pelham plant to another location, according to a recent announcement. The closure will idle 115 people in an area that already has a high unemployment rate.

NOTE: These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers throughout Georgia. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1988 benchmark. Totals may not add because of rounding.

GEORGIA LABOR MARKET TRENDS

VOLUME XV, NUMBER 10
(October 1989 data)

State and local education drive employment up

Georgia's nonagricultural employment increased 11,600 in October, most of it the result of normal seasonal increases in state and local education. Annually, employment rose 33,200, most of it in the services and government divisions.

The manufacturing division managed an anemic 100 increase from September; at the same time, it dropped 6,600 from October 1988. The only over-the-month change of any note occurred in textiles. That industry rose 800 because of more activity in knitting mills, floor covering mills, and yarn and thread mills. The annual comparison saw declines in almost every industry.

The largest loss occurred in apparel and other finished textile products, which was down 2,900 from last year. Transportation equipment dropped 2,800 because of cutbacks in both automobile and airplane assembly.

On the positive side, heavy demand for processed chicken led to a substantial employment increase in the food industry. More business in knitting mills and floor covering mills more than offset declines in yarn and thread mills and cotton weaving mills. The net result was a gain of 900 in textiles.

Construction employment dropped from both reference periods. Most of the decline occurred in the Atlanta area where the market appears to be overbuilt. According to some sources, the soft Atlanta market currently has a two-year supply of single-family houses. Outside the Atlanta area, general building and special trades contracting (the sectors that deal with residential construction) show slight gains. In heavy construction, which includes the building of such things as roads, bridges, and pipe lines, the Atlanta area is performing better than the remainder of the state.

Employment in transportation and communication rose 900 over the month and 1,400 over the year. The monthly increase was triggered by gains in motor transportation, water transportation, transportation services, and commercial airlines. Over the year, gains in motor freight

Continued

New developments

Pep Boys has announced plans to build a 250,000-square-foot distribution center in Henry County to serve its 50 southeastern stores. The center will occupy an 18-acre site in Liberty, a Park for Industry, which is located near Interstate 75. The facility, which is scheduled to open in December 1990, will employ 120 people. Philadelphia-based Pep Boys operates a chain of automotive parts and service stores, including 14 in the metropolitan Atlanta area, one in Athens, and one in Macon. Two stores are scheduled to be opened in Augusta by December.

First Union Corporation of Georgia will eliminate from 100 to 300 positions by the end of January, according to the chairman of the board. Some, but not all, of the displaced employees will be offered other positions in the company. This follows a recent announcement that First Union National Bank of Georgia would cut a number of managerial and clerical support positions from its operations. Both First Union Corporation of Georgia, a bank holding company, and First Union National Bank are subsidiaries of First Union Corporation of Charlotte, North Carolina. The cutback is a result of First Union's streamlining its operations by consolidating support services.

State and local education drive employment up

Continued from page 1

transportation; transportation services; and local, suburban, and interurban transportation were partly offset by declines in airlines and railroads.

The trade industries recorded very modest growth from last month. Some seasonal increases occurred in department stores, but they were largely offset by declines in eating and drinking places.

Wholesale trade grew by 4,900 from October 1988. Almost two-thirds of the gain was in wholesale durable goods.

The retail sector, on the other hand, declined by 1,300 over the year. The major losers were auto dealers and service stations, apparel and accessories, and eating and drinking places. Food stores, department stores, and miscellaneous retailers reported more activity.

Finance, insurance, and real estate lost employment from both reference periods. All of the losses were in financial institutions, such as banks and credit agencies, where it appears that the "shaking-out" process referred to in earlier reports is still under way. The insurance industry reported modest growth both over the month and over the year.

Services grew only 400 from September, but 19,300 from last year. Amusement and recreational services fell 1,100 from last month, a normal seasonal decline.

One of the fast-growing sectors of the services division is social services. This includes day care, private vocational services, family and individual counseling, and resident care. The continuation of the trend for all adults in a family group to work outside the home and the increasing elderly population make it reasonable to expect that this industry will continue to grow.

Government employment recorded substantial increases from both reference periods. State and local education was responsible for most of the monthly growth, which was a normal seasonal increase. The Internal Revenue Service laid off some temporary employees, and state government agencies also released some of their summer hires. Growth in local government occurred largely because Fulton County rescinded a hiring freeze that had been in effect for some months.

New developments

Continued from page 1

BarclaysAmerican/Financial, Inc., a subsidiary of Barclays Bank, has announced the closure of its Atlanta Manufactured Housing Regional Office, which is located in Gwinnett Commerce Center. About 50 positions will be terminated.

Tallman Easy Glass Pools, Inc., has laid off 28 employees following a fire that devastated its Clayton County manufacturing facility. This was the second major fire the company has suffered. The first one occurred less than two years ago, also doing considerable damage.

Cobb Community Transit, which began operations earlier this year, has announced plans to expand the system that is already operating to capacity. No information is currently available on how many new jobs will be created.

King Edward Cigar Company will move a portion of its operations from Tampa and Jacksonville, Florida, to its Waycross facility. The present structure will be expanded to accommodate an additional 200 workers. June 1990 is the tentative startup date. Current employees will be offered the opportunity to transfer from Florida to Georgia, but as not all of them are expected to do so, there will be an as-yet-undetermined number of new jobs for Waycross area residents.

GEORGIA LABOR MARKET TRENDS

VOLUME XV, NUMBER 11
(November 1989 data)

November Employment Rises

Georgia's nonagricultural wage and salary employment rose 8,000 from October and 31,700 from November 1988. Almost all of the monthly gain occurred in retail trade, while two-thirds of the annual increase was in the service industries.

Construction employment was up by 500 from both reference periods. All of the monthly gain occurred in special trades contracting. Heavy building remained unchanged, and general building declined from last month.

From last year, general building rose 900 and special trades contracting went up 300, while heavy building dropped 700.

Manufacturing declined both over the month and over the year. Most of the decreases from both reference periods occurred in the durable goods industries. Transportation equipment dropped 3,400 from October and 5,500 from November 1988. Part of the decrement was because of cutbacks in automobile assembly plants and part because of reductions in the aircraft industry. Further retrenchments are expected in the auto industry as companies try to bring inventories in line with sales.

Employment in canning and preserving dropped by 500 from last month, a normal seasonal decline. Employment is up 500 over the year, however, attesting to the general well-being of this sector.

Textile mill employment declined by 1,000 from October, mostly because of less business in floor covering mills and yarn and thread mills.

Although up slightly from last month, employment in apparel and other finished textile products dropped 2,400 from last year. Two-thirds of the decline was in men's and boys' clothing.

Continued

New developments

Delta Air Lines has announced plans for a major expansion at Atlanta Hartsfield International Airport. The company will build a paint shop hangar, a hazardous waste incinerator, and a waste treatment facility. Ground transportation systems and cargo and in-flight meal storage areas will be expanded, and engine repair shops will be renovated. A Delta spokesman said the new or expanded facilities are needed to accommodate 519 new planes the company has ordered over the next 10 years. The expansion will be financed by $347.9 million in tax-exempt municipal bonds, the largest such issue ever by the City of Atlanta for a single project. Delta officials were unable to say how many new jobs would be created, but stated that the number would be substantial.

Oglethorpe Power Corporation plans a $150 million generating plant in Monroe County. The company is currently acquiring land for the facility, which is expected to have a generating capacity of 250,000 kilowatts with possible future expansion to 750,000 kilowatts. About 20 people will be employed.

American Telephone and Telegraph Company recently announced further staff cuts nationwide, which may result in more AT&T employees in the Atlanta area. Some 25,000 jobs were eliminated in 1989, and an additional 8,500 will be cut in 1990. However, many of the company's service branches will be consolidated into several major communication hubs because modern computer capabilities no longer require that service facilities be physically close to the customer. Although AT&T plans to cut 1,400 jobs for its Materials Management Unit nationwide, it will add 200 jobs to the 600 already in the Atlanta facility.

November Employment Rises

Continued from page 1

Transportation and public utilities employment rose from both reference periods. Almost all the monthly gain was in commercial airline transportation.

Retail trade recorded a seasonal gain of 7,000 from October, although the sector dropped 2,000 from November 1988. As might be expected, department stores were the largest gainers, increasing 2,900 over the month and 2,000 over the year. Food stores rose 1,100 and 1,200, respectively, and miscellaneous retail stores went up 700 from October and 500 from last year. Apparel and accessory stores employment gained 700 from last month, while dropping 1,600 over the year. One of the fastest growing segments of the trade industries, eating and drinking places, rose 600 from October, but lost 1,800 from November 1988.

Services gained 900 this month, largely because of more activity in business services. Minor losses occurred in several other segments. The division grew by 20,300 from last year.

Government employment rose 2,700 from October and 16,300 from last year. Most of the monthly gain resulted from increased employment in local government and local education.

New developments

Continued from page 1

Tanger Factory Outlet Center has opened near Commerce. The shopping mall has 100,000 square feet and is located at exit 53 off Interstate 85. About 75 percent of the stores are open with the remainder slated to begin operations soon. Because of the strong demand for space, a second phase will be built and is expected to be ready for occupancy in the spring. All of the stores are direct manufacturer's outlets, which control both inventory and operations. Tenants include Liz Claiborne, Gitano, Corning Glass, London Fog, Van Heusen, Barbizon Lingerie, and American Tourister. The mall opening has created about 500 new jobs.

Wal-Mart will open a new store in Cornelia, according to a company spokesman. The 64,000-square-foot facility, which will be located in the Habersham Crossing Shopping Center, is scheduled for completion early in 1990. More than 150 people will be employed in the retail outlet.

The William Carter Company will move its merchandising division from Needham, Massachusetts to Atlanta next spring. The children's clothing manufacturer is moving to The Summit at Southlake in order to be near the company's manufacturing facilities in Griffin, Barnesville, and Hogansville. About 25 people will be hired locally.

Pike Nurseries Inc. announced that it has acquired 11 Green Brothers Nursery locations following their closing in June 1989. Earlier, Pike bought and reopened three former Green Brothers sites. A company spokesman declined to say how many of the newly acquired sites will be reopened, but did say that Pike has already employed several former Green Brothers managers and is interviewing other workers. About 270 people worked for Green Brothers.

Coats and Clark Inc. has announced that its Acworth spinning plant, once slated to be closed by the end of the year, will remain open after all. A company spokesman said that sales, especially of threads to be exported, have grown much faster than originally expected. He said that, in addition to the 130 people currently employed, an unknown number of new workers may be hired.

NOTE These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers throughout Georgia. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1988 benchmark. Totals may not add because of rounding.

NOTE: These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers in the Savannah MSA, which includes Chatham and Effingham counties. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1988 benchmark. Totals may not add because of rounding.

* Industry division does not meet disclosure criteria.

GEORGIA LABOR MARKET TRENDS

ANNUAL ISSUE
Volume XV, Number 12

Service-producing industries record healthy growth

Fueled by strong growth in the services and trade divisions, Georgia's nonagricultural wage and salary employment rose 67,300 from 1988 to 1989, an increase of 2.3 percent. All of the gains occurred in the service-producing industries. The goods-producing industries (mining, construction, and manufacturing) all recorded losses in employment from the previous year.

Employment in contract construction declined by 3,300, or 2.2 percent. Heavy building went down by 2,600, or 10.3 percent, while special trades contracting lost 2,900, or 3.4 percent. Offsetting the declines in the other segments was a 5.5 percent gain in general building.

Decrements in both durable goods and nondurable goods manufacturing resulted in an overall loss of 5,600, or 2.5 percent, in the manufacturing division. Durable goods dropped by 5,600 and nondurables by 500.

The biggest loser among the manufacturing industries was transportation equipment, which declined by 6,200, or 12.5 percent. Steady declines in the manufacture of aircraft and numerous layoffs in automobile assembly plants caused the drop.

Apparel and other finished textile products decreased by 3,300, or 4.9 percent. Most of the decline took place in men's and boys' clothing.

Printing and publishing employment dropped by 900, or 2.3 percent. The slowdown in this industry reverses a trend of steady growth since 1980, reflecting the growing use of technological advances to reduce manpower requirements. Commercial printing dropped by 500, and printing except commercial and newspapers declined an additional 500. Newspaper publishing recorded a small gain of 100 (0.8 percent).

On the positive side, employment in machinery, except electrical, rose 1,900 from last year.

A gain of 1,500 was also recorded in textile mills, amounting to 1.4 percent. The floor covering industry, up 1,100, accounted for most of the increase.

Food was up 1,400, or 2.3 percent. The poultry industry was responsible for the entire gain. The industry, which has been an important part of the state's economy for many years, takes on additional significance with the growing trend toward the substitution of poultry and seafood for red meat

JOE D. TANNER, COMMISSIONER

Service-producing industries record healthy growth

Continued from page 1

and with the emergence of specialty poultry products as a vital portion of the fast food industry

Employment in paper and paper products increased by 1,400, or 4.4 percent. Although this industry prospered during 1989, its operations tend to be cyclic, and a downturn in the economy could affect it adversely.

Unlike the goods-producing industries, the service-producing industry divisions all grew during 1989. That group of industries increased in employment by 76,800, or 3.6 percent.

Transportation and utilities employment increased 1,600, almost two-thirds of it in the transportation segment. A strike at one airline was the primary cause of a drastic drop in March employment; however, employment in December was equal to about 90 percent of the pre-strike level.

Employment in the trade industries increased by 17,900. The wholesale sector went up 7,700, or 3.6 percent. Retail trade industries gained 10,300, or 2.0 percent. Although nearly all retail sectors shared in the increment, food service was the biggest gainer, rising by 2.5 percent from 1988.

Finance, insurance, and real estate employment rose 2,300, or 1.4 percent. Most of the gain was in insurance, which rose 1,300, or 2.5 percent. The financial sector has seen a number of major mergers during the past year with a resultant streamlining of operations and elimination of many duplicative jobs. As a result, finance grew by only 600, or 0.8 percent from 1988.

The greatest growth occurred in the service industries, a widely varied group that includes some of the most highly paid and highly skilled professional occupations as well as a large number of low-paying, unskilled jobs. Services increased by 36,400, or 6.4 percent.

Although most of the service industries increased, the largest gain occurred in business services. That sector rose 9,600, or 7.4 percent. The most significant factor was the rapid growth in temporary help agencies, which increased by 5,000, or 12.6 percent. Security services was another growing sector, increasing 2,600 (8.3 percent). Computer programming, data processing, and other computer-related services grew by 1,600, or 9.5 percent.

Health services employment increased 8,000, or 5.8 percent. Hospitals rose by 2,400, (4.6 percent) and miscellaneous health services gained 5,600 jobs for a 6.5 percent increase.

Employment in engineering, accounting, research, management, and related services employment rose 3,300. This was a 10 percent increase.

Government ranked second among the major industry divisions in both the number of jobs gained and in percentage increase. Employment rose 18,600, or 3.8 percent. Slightly more than half the new jobs were in local government with most of those falling into local education. State government gained 7,400 jobs, and federal government rose 1,400.

[2] Includes furniture and fixtures; stone, clay, and glass products; fabricated metals; nonelectrical/electrical machinery; and miscellaneous manufacturing industries.

[3] Includes apparel and other finished products; and printing, publishing, and allied industries.

Notes

All estimates of employment for nonagricultural wage and salary workers (except domestics) for Georgia and all Metropolitan Statistical Areas (MSA's) have been prepared in cooperation with the United States Department of Labor, Bureau of Labor Statistics. They are comparable with the national estimates prepared by that bureau and with state and area estimates prepared by cooperating agencies in other states.

The revised employment series for 1988-1989 have been adjusted to benchmark levels indicative of 1989 records generated by the Georgia Employment Security Agency and supplemented by special benchmark data for groups of workers not fully covered by records from the above agency. These include such groups as railroads and railroad services, insurance agents on straight commission, churches, and other religious nonprofit organizations.

This series is based upon reports submitted by selected cooperating employers, with the exception of proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the Armed Forces. Estimates include all full and part-time wage and salary workers who were employed during the pay period containing the twelfth of the month. Regular members of the faculty in private and public schools are considered employed throughout the year even though they may be on vacation during the summer months. Other workers on unpaid vacations are not counted as employed for the period concerned.

The hours and earnings series for 1988-1989 for all industries have been adjusted to the appropriate benchmark for employment and revised where necessary to reflect changes in code definitions or classifications.

Average weekly earnings, average weekly hours, and average hourly earnings in manufacturing industries are estimated for production workers only and exclude supervisory, sales, office, clerical, and other office personnel.

Average earnings are computed on a "gross basis" reflecting changes in basic hourly and incentive wage rates as well as premium pay and overtime and late shift work. Payments made by the employer directly to employees for vacations, holidays, and sick leave are included. Retroactive pay and bonuses, unless earned and paid for on a regular basis, are excluded. Value of free fuel, rent, meals, or other payments in kind is also excluded.

Average weekly earnings are a product of rounded average weekly hours and average hourly earnings.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 1
(January 1990 data)

January employment takes seasonal drop

At 2,978,300, Georgia's nonagricultural wage and salary employment dropped 35,800 from the December level. Almost two-thirds of the decline occurred in the trade industries, and most of the remainder was in manufacturing and construction. Over-the-year job growth of 95,400 was recorded.

Although construction employment went down 4,700 from December, the division grew by 3,000 from January 1989. From last month, general building declined by 1,400, heavy construction by 800, and special trades contracting by 2,600. Over the year, general building went up 4,600, probably because of a much milder than normal January. Heavy building dropped 500 and special trades contracting declined 1,200.

Manufacturing employment declined from both reference periods, although the yearly figures in particular were a mixed bag with healthy growth in several industries and disappointing drops in others.

The biggest loser from both reference periods was transportation equipment, which dropped 3,700 from last month and 5,500 from last year. Most of the losses occurred because of cutbacks at automobile assembly plants, although a portion of the yearly decrement was credited to contract completions in aircraft assembly.

Although down 900 from December, food and kindred products increased 1,200 from January 1989. Most of the gain was in poultry and egg products. The monthly loss was seasonal; only once since 1980 has the industry gained employment from December to January.

Continued

New developments

Turbine Support Company, a division of Chromalloy Gas Turbine Corporation of San Antonio, Texas, has announced plans for a 30,000-square-foot facility in LaGrange. Compressor components for gas turbine engines will be repaired in the plant. The plant, which will employ some 40 people, is scheduled to open in March. The company has other plants in Newnan, Carrollton, and Franklin.

General Motors Corporation has announced that the planned closing of the Lakewood assembly plant will be postponed. Initially scheduled to close in mid-March, the facility will remain open an additional one to three months in order to fill the remaining orders. About 2,200 workers will be idled when GM Lakewood is closed "indefinitely," according to a company spokesman.

GM's Doraville assembly plant has also fallen on hard times. The company recently eliminated the second shift because of sluggish sales of the Oldsmobile Cutlass Supreme. Market demand will determine when the 1,900 laid-off workers can return to their jobs.

Rich's, the Atlanta-based institution whose parent company has filed for protection under Chapter 11 of the bankruptcy code, has announced that its credit division will be consolidated with the credit operations of most of the other chains owned by Federated Department Stores and Allied Stores in a regional center near Cincinnati. Chairman Roger Farah of Rich's said that the consolidation is a cost-cutting measure not associated with the bankruptcy proceedings. About 150 jobs will be eliminated in the Atlanta facility, but an unknown number of employees will be transferred to other positions within the Rich's organization. The remainder will receive severance pay and placement assistance.

January employment takes seasonal drop

Continued from page 1

Employment in transportation and public utilities was down by 2,700 from December, while growing 3,300 over the year. The decline from last month was primarily because of a seasonal drop in the motor freight industry, which fell by 2,200.

Wholesale and retail trade employment dropped 20,000 from December while gaining 19,500 from January 1989. Although the yearly growth was shared by both the wholesale and retail sectors, almost all the monthly decline was because of seasonal drops in the retail industries.

Services dropped slightly from December while growing substantially from January 1989. Most of the monthly decline can be attributed to seasonal factors, especially the drop in employment in temporary help agencies and hotels and lodging places. The annual growth was shared by almost all segments.

Government employment rose from both reference periods. The monthly growth in state education was caused by the rehiring of student assistants who are normally furloughed during December.

New developments

Continued from page 1

General Electric Capital Corporation has announced plans for a major credit card billing and receiving operation in Macon. To be operated by a GE subsidiary, Monogram Retailer Credit Services, Inc., the facility will initially occupy a 200,000-square-foot building. A future expansion may increase the company to 2 1/2 times its initial size. The company handles credit operations of a number of retailers, including Montgomery Ward. The new facility will employ about 300 people when it opens next year, a number that could double or even triple in a few years.

AT&T has announced that the company will move its Operator-handled Conference Center from Atlanta to Albany. The planned move will offset the effects of the planned closing of another operator service center in Albany.

Sears, another of the state's retail giants, has announced plans to eliminate its Atlanta accounting operations, most of which are located at 675 Ponce de Leon Avenue. Around 200 people will be affected. Some of them will be offered other positions with the company, but they may require relocation. Employees not absorbed by the company or who elect not to transfer will be offered placement assistance.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 2
(February 1990 data)

Trade employment drops, most others up

Georgia's nonagricultural wage and salary employment rose 10,100 from January and 95,000 from February 1989. The overwhelming majority of the gains occurred in the service-producing industries, although the goods-producing industries managed small increases from both reference periods.

Contract construction rose 1,600 over the month and 4,200 over the year. General building was up 400 from January and 4,500 from February 1989. Heavy construction rose 200 over the month, but declined 400 from last year. Special trades contracting went up 800 from January, while remaining unchanged over the year. The annual increase in general building appears to be caused by the continued high rate of commercial building and the extraordinarily mild winter weather.

Manufacturing eked out a small gain from February while dropping 2,000 from last year. Most of the monthly fluctuations were insignificant, but the yearly figures reflect the continued problems being experienced in some sectors, most notably transportation equipment. One automobile parts plant recalled staff from a layoff, resulting in a small monthly increment in employment. The announced discontinuation of the second shift at one major automobile assembly plant occurred after the reference week for employment estimates and will not be reflected until next month although it actually occurred in February.

Among the nondurable goods industries, apparel and other finished textile products continued to slip, dropping by 1,500 from February 1989. Two of the state's major apparel manufacturers have recently announced plans to close or otherwise divest themselves of their operations (see New Developments).

Transportation and public utilities rose a scant 200 over the month while gaining 2,200 from last year.

Continued

New developments

American Telephone and Telegraph Company has announced plans for two new major divisions in the metropolitan Atlanta area. AT&T's new National Engineering Center will be located in the company's regional headquarters, the Promenade complex in Midtown. It will employ approximately 2,000 engineers and technicians by the end of 1992. At least five other cities, including Birmingham, Alabama; Chicago, Illinois; Cincinnati, Ohio; Columbus, Ohio; and Louisville, Kentucky, were being considered as locations for the new division. In addition, AT&T will open two new national Network Control Centers in Conyers, Georgia, and Denver, Colorado. The centers will provide long-distance system surveillance and management, according to a company spokesman. The Conyers facility will employ from 500 to 800 by the end of the year, most of who will transfer from other locations around the country. The two new centers will make AT&T's Atlanta work force second in size only to the company's New Jersey headquarters. The company is also considering Atlanta as the site for its consolidated network design and engineering division, currently scattered throughout the country.

Health-Tex, Inc. has announced plans to sell, lease, or close its Warrenton, Georgia, plant by the end of the summer. The move jeopardizes the jobs of about 400 people in the small Augusta-area community. Local officials are optimistic that a buyer will be found for the facility in time to prevent wholesale layoffs.

Trade employment drops, most others up

Continued from page 1

Almost all the annual increase was in the transportation sector, much of it in air transportation.

Trade employment dropped 1,800 from January levels while increasing a healtny 22,900 from February of last year. The wholesale sector rose 800 over the month and 7,600 over the year. The monthly gain was heavily weighted toward the nondurables sector; the opposite is true with regard to the annual gain.

Retail trade dropped 2,600 from last month and increased 15,200 over the year, equating to an annual growth rate of 3 percent. Heading the pack was eating and drinking establishments, up 1,500 over the month and 10,200 over the year for an annual growth rate of 5.9 percent. Food stores was up 500 from January and 3,800 from last year (annual growth rate: 4.9 percent).

The only significant negative in retail trade was the decline in department stores. Down 2,800 over the month and 1,500 over the year, this sector has been deeply troubled for some months. The bankruptcy of the Campeau Corporation, owner of Rich's, has dictated policies that include deep price-cutting, layoffs, and consolidation of certain operations to improve their cash flow. Rival Macy's is also cutting prices and practicing economy measures following four straight quarters of operating losses. The troubles of these two retail giants is leading to increased caution on the part of other retailers. In a highly labor intensive industry, the easiest and most obvious belt-tightening measure is the elimination of jobs.

Only negligible monthly fluctuations occurred in finance, insurance, and real estate; however, the annual gain of 100 did not adequately reflect shifts within that division. Financial institutions dropped 2,000. The decline occurred mostly because of mergers and subsequent reorganization within the industry. Insurance carriers and brokers recorded a healthy employment gain of 2,100.

Once again, the service industries produced the largest gains from both reference periods. The yearly gain of 12,600 in business services translates into an annual growth rate of 9.4 percent, one of the highest in any industry. More specifically, the strong growth segments were personnel services, computer services, and detectives and guard services.

Government employment rose 5,100 from January and 25,800 from February 1989. The majority of the annual gain occurred in state and local education and local government. The monthly gains in state and local education and the Internal Revenue Service were seasonal.

New developments

Continued from page 1

The Lee Company will close its Jasper, Georgia, plant in June, according to a recent announcement. Lee is a division of VF Corporation of Wyomissing, Pennsylvania. Its primary product is denim jeans. A company spokesman blamed the company's declining market share for the closing, which will idle some 300 workers. A plant in Guntersville, Alabama,which employs 400 people, will also be closed.

Smith and Nephews Medical, a maker of latex surgical gloves, will close. Citing foreign competition, the company has announced that it will cease operations, idling about 70 people in Columbus.

Sara Lee Hosiery, a division of the Hanes Corporation, will lay off almost 400 people in the LaGrange area. The company said that the plant has excess capacity, making it necessary to cut back to reduce inventories.

Integrated Products of Aragon, Georgia, will close as soon as current supplies of material are exhausted. The maker of synthetic carpet yarn laid off some 50 people in February and will release the remaining 200 within a few weeks.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 3
(March 1990 data)

Retail trade, services growth continues

Georgia's nonagricultural wage and salary employment rose 9,700 from February and 95,900 from March 1989. Nearly all the growth from both reference periods took place in services, trade, and government.

Contract construction declined by 800 from February while increasing 1,600 from March of last year. The monthly losses were evenly split between general building and special trades contracting. The annual growth occurred in general building, which rose 3,300. Special trades contracting dropped 1,300, and heavy construction declined 400 over the year.

Manufacturing employment went down from both reference periods. The overall monthly loss of 600 was almost entirely due to insignificant fluctuations throughout the manufacturing sector. Only transportation equipment recorded an increase of any moment, but it did not represent true growth, but merely a recall from layoff at one large automobile assembly plant

From last year, manufacturing employment dropped 1,500 with the largest loss occurring in lumber and wood products, followed by apparel and other finished textile products and stone, clay, and glass products. Machinery, except electrical; fabricated metals; and electric and electronic equipment recorded moderate growth which partly offset losses in other industries.

Transportation and public utilities employment increased by a mere 100 people from February, but rose by 7,200 from March 1989. Little of this increase represented growth. It reflected the fact that most of Eastern Airlines' employees went on strike in March 1989, and many of them had returned to work by March 1990.

Wholesale and retail trade continued the growth that has marked this division for some time. Whole-

New developments

Tom Thumb Glove Company, Crawford County's largest industry, was severely damaged by fire in early April. The loss is a severe blow to an area that has a small industrial base and few jobs already. The plant manager said that about 75 percent of the facility was destroyed, leaving only the sewing department intact. As soon as the initial cleanup and inventory are completed, about a quarter of the work force of 105 people will return to work, but it is not known when or even if the rest will be rebuilt.

Bowman Transportation Company, Inc., has shut down following an abortive attempt to sell the company by the estate of the late Mr. Bowman. The privately held company had 3,000 employees in 31 states when the layoffs began. Some 300 Atlanta workers have been terminated.

Lockheed Corporation has announced that 750 employees will be laid off from its Marietta assembly plant as part of a company reorganization and downsizing. Most of the layoffs will occur among the company's white-collar employees, specifically people in engineering, finance, and information systems, according to a company spokesman. The layoffs are expected to be completed by June 30, and the company hopes that no more will be required. The latest round of furloughs will bring the company's work force to about 8,800, fewer than half the 20,000 plus payroll Lockheed had 2 years ago.

JOE D. TANNER, COMMISSIONER

Retail trade, services growth continues

Continued from page 1

sale trade went up 900 from February and 7,300 from March 1989. Most of the increase occurred in wholesale nondurable goods.

The retail sector increased by 3,300 over the month and by 14,000 over the year. Eating and drinking places employment increased most: 2,000 from February and 10,400 from last year. Building materials, hardware, and farm equipment recorded a monthly increase of 500. This gain can be attributed to the coming of the spring season which brings a rash of planting, repairs, and general maintenance and improvement projects. Food stores and miscellaneous retailers each recorded substantial gains as well.

The only loser of any note in the trade industries was department stores. That sector declined 500 from February and 3,300 from March 1989. The major factor is economic problems plaguing several major retail chains. Heavy debt, an intensely competitive market, and declining profits are forcing retailers to cut overhead by eliminating jobs and pulling out of unprofitable markets.

Finance, insurance, and real estate rose 1,000 over the month with the increase distributed throughout the division. An overall annual increase of 300 did not reflect the considerable disparity in the economic health of the various sectors. Financial institutions, which are in the throes of some painful belt-tightening as a result of mergers, competition, and closer scrutiny in the wake of the savings and loan scandal, dropped 2,000. Insurance carriers, agents, and brokers recorded annual growth of 2,200.

Services continued its prodigious growth, up 3,800 from last month and a monumental 40,100 from March 1989. The most significant monthly increase occurred in amusement and recreational services, a seasonal gain. Almost all sectors shared in the annual growth, but the largest share went to business services, personnel services, computer services, engineering and architectural services, and accounting services.

Government employment rose from both reference periods. Other federal employment rose 900 from February and 1,700 from March 1989, much of it at the IRS. Federal defense dropped by 400 both over the month and over the year, much of it cutbacks at Ft. McPherson. State and local governments also increased.

New developments

Continued from page 1

Holiday Inns Inc. has announced plans to expand its Atlanta-based international headquarters staff to 150-200 people. The company is currently reviewing its domestic, Caribbean, and South American operations and will announce details on relocations by mid-May. Holiday Inns was recently acquired by London-based Bass PLC.

Unisys Corporation will consolidate some of its software operations at its Norcross plant beginning in June, said a company spokesman. Approximately 120 jobs will be relocated, and many current employees of the company are expected to follow their jobs to Atlanta. The consolidation will be effected by closing its Nashville, Tennessee, office and reducing the size of plants in Eagan, Minnesota, and Radner, Pennsylvania. The spokesman said that the consolidation was undertaken in order to be closer to several of its largest customers.

Gulfstream Aerospace Corporation has announced cutbacks expected to eliminate about 170 jobs in Savannah. Many of the jobs to be cut involve professionals hired on a contract basis who are not actually a part of Gulfstream's own work force. A relatively small number of production supervisors' jobs will also be eliminated, but those people will be offered assembly jobs, according to a company spokesman. The company may also reduce its research and development expenditures to bring costs in line with expected revenues.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 4
(April 1990 data)

New Developments

Cooper Tire & Rubber Company has made the long-awaited announcement that the Albany tire manufacturing plant it acquired from Bridgestone-Firestone late last year will be reopened. Cooper will spend $100 million to renovate the 1.8 million square-foot building. Production is slated to begin in the second half of 1991. The plant will operate around the clock producing radial automobile and truck tires. It will be staffed by some 800 employees.

Hayes Microcomputer Products, Inc., is cutting another 150 workers from its payroll following a smaller layoff late last year. The company president blamed slower-than-expected growth and increased competition for his company's streamlining. Sales offices in Los Angeles, New York City, Washington, D.C., and Toronto, Canada, will also be closed, and the company's integrated services digital network development will be moved to San Francisco.

Contel Corporation has announced a major restructuring that is expected to eliminate 600 jobs across the country over the next two years. A company spokesman declined to speculate on how many, if any, jobs would be cut in the company's Atlanta headquarters. Most of the cuts are expected to be made through attrition, he said.

Continued

April Employment Up

Nonagricultural wage and salary employment totalled 3,006,700 in April, an increase of 3,000 from March and 97,900 more than April 1989. All of the major industry divisions shared in the annual growth, and only government and finance, insurance, and real estate failed to increase over the month.

Construction rose 200 from last month and 2,800 from last year. All of the monthly growth came in general building; heavy construction was unchanged, and special trades contracting dropped slightly. Annually, general building rose sharply while the remaining sectors declined.

A comparison with previous years shows that, although employment in April 1990 is up from April 1989, it is still well below the level of 1986, 1987, and 1988 (see chart). The industry reached its peak during the decade of the '80s in 1986.

Manufacturing employment registered only insignificant fluctuations from March to April, but there were

April Employment Up

Continued from page 1

some noteworthy changes over the year. The most significant was a decline of 2,300 in apparel and other finished textile products. The apparel industry, once one of Georgia's strongest manufacturing industries, is steadily losing ground as more and more cut-and-sew operations are moved to cheaper labor markets.

Lumber and wood products have also declined from last year. Although the construction industry has picked up in Georgia, other markets served by Georgia's wood products industry, such as the Midwest and Northeast, are experiencing severe slumps in the construction of single family dwellings.

Stone, clay, and glass, another industry that is affected by developments in the construction industry, dropped sharply over the year. Most of the declines occurred in glass products, structural clay products, and concrete, gypsum, and plaster products.

Textile mill products dropped by 1,600 from last year, with cotton weaving mills responsible for the majority of the loss. This resulted mostly from the glut of denim fabric on the market.

Nonelectrical machinery rose by 1,300 from last year. Most of the growth occurred in farm and garden machinery, more specifically, in lawn and garden equipment. Service industry machinery increased modestly.

The only significant over-the-month gain among the service-producing industries was in trade. The division also recorded an impressive gain from last year. The strongest growth occurred in eating and drinking places.

Although down slightly from March, services gained 37,200 from April 1989. Most of the gains were in health services, temporary employment services, and hotels and motels.

Although up in nearly all segments from last year, government dropped 2,900 from March employment levels. Most of the monthly declines were seasonal drops at IRS and in state and local education. Much of the annual increase in federal government came about because of hiring by the Census Bureau for the 1990 decennial census.

New Developments

Continued from page 1

GNB, Incorporated has announced plans to lay off 125 people from its Automotive Battery Division in Columbus. The layoffs, which are expected to be permanent, will begin in early June.

ZUA Autoparts, Inc., a joint venture of Zahnradfabrik Friedrichshafen (ZF) AG and Atsugi Unisia Corporation. Atsugi Unisia, a division of Nissan, has announced plans to build a $15 million auto parts manufacturing plant in Gainesville. The plant, representing a partnership between West German and Japanese interests, will make power steering pumps for automobiles and light trucks. It will eventually employ about 120 people. ZF already has a transmission manufacturing facility in Gainesville.

Health-tex Inc. has reversed its previously announced decision to close its Warrenton plant. A company spokesman said in March that both the Warrenton facility and another in Centreville, Alabama, would be closed or sold this year because of excess production capacity. New orders for the company's line of children's clothing now mean that the plant will remain open; a production schedule has been established through 1991. With 500 employees, Health-tex is Warrenton's largest employer.

Sara Lee Hosiery Company of LaGrange has announced plans for a permanent reduction in force. Almost 400 people will be affected. The layoff is expected to be completed by September 1.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 5
(May 1990 data)

Census Swells Employment Rolls

Georgia's nonagricultural employment numbered 3,016,400 in May, an increase of 12,500 from April and 86,300 more than last year. Although most industry divisions shared the monthly growth, more than half occurred in government, largely because of the decennial census of the population. Nearly all of the annual growth occurred in the service-producing industries. Among the goods-producing industries, construction grew slightly, mining was unchanged, and manufacturing lost employment.

Construction employment was up 500 over the month and 600 over the year. The monthly gain was shared by all sectors, but the annual increase (2,800) occurred entirely in general building. Heavy construction lost 300, and special trades contracting went down 1,800 from May 1989.

Manufacturing rose 1,000 from April, but declined 4,200 from last year. The monthly increase was almost evenly split between durable and nondurable goods, while the annual decline was weighted toward the durable goods sector.

Transportation equipment went down 2,900 over the year. Nearly all the decline occurred in automobile assembly plants. Employment dropped 400 in aircraft manufacturing, while rising 100 in miscellaneous transportation equipment.

Food and kindred products rose 300 from April and 1,300 from May 1989. The over-the-month increase was caused by a seasonal increase in canning and preserving. The annual gain occurred because of more business in bakery products and meat and poultry products.

— Continued

New Developments

Dundee Mills, Inc. of Griffin, Georgia, has purchased Hartwell Mills in Hartwell, Georgia. The company will spend $20 million dollars to renovate the plant, retooling to produce towels and building a finishing and warehouse facility. About 150 new jobs will be created.

Amitech, Inc. of Marietta will construct a 43,000-square-foot facility in Dougherty County, according to a recent annoucement by the Albany-Dougherty County Economic Development Commission. The manufacturing plant will be built to "clean room" standards for production of health care and electronics components. Start up is scheduled for February 15, 1991. The facility will initially employ 25 people and will increase to 75 at full production.

Sears, Roebuck and Company has announced plans for a substantial layoff at its Macon Credit Central. Although no firm beginning date was announced, a company spokesman said that all the terminations would be completed by early August. Almost 100 people will lose their jobs.

Tennessee Chemical Company of Copperhill, Tennessee, which filed for bankruptcy in February, may be acquired by Boliden Intertrade, A.G. Boliden has successfully negotiated certain environmental issues with the U.S. Environmental Protection Agency and the Tennessee Department of Natural Resources. They have also reached an interim agreement with the four unions representing hourly workers at TCC, as well as a management agreement with the company itself. Boliden plans to operate the production facility for six months, during which time it will decide whether or not continued operation is economically feasible. TCC has about 150 employees.

Census Swells Employment Rolls

Continued from page 1

Textile mill products grew by 200 from last month, while declining 1,500 from last year. More than half the annual loss was in broadwoven cottons. Floor covering mills, which has been the healthiest portion of the textile industry for some time, recorded a loss of 400, largely because of market conditions caused by the depressed residential housing market.

Apparel was up a modest 400 from April, but dropped 2,500 from May 1989. The monthly gain occurred because of the recall of some employees following a layoff. The loss was experienced throughout the industry.

Although imports continue to be a factor in the decline of textile jobs, they are not the only factor. Modernization and increased automation have reduced the number of people required for production.

Transportation and public utilities rose 500 from last month and 7,400 from last year. Most of the yearly increase transpired as a result of the resolution of the labor dispute at Eastern Airlines and subsequent realignment following the company's bankruptcy filing.

Wholesale and retail trade rose by 2,900 over the month and 20,300 over the year. Most of the monthly gain was in the retail sector, but the annual increase was more equally shared between retail and wholesale trade.

Although most sectors of the retail division shared in the increase in some measure, the majority of the gains from both reference periods occurred in eating and drinking places. This sector rose 1,800 over the month and 9,000 over the year.

Finance, insurance, and real estate was little changed overall, but there were some sizeable internal fluctuations over the year. Because of mergers and general belt-tightening in the banking and savings and loan industry, the finance sector lost 1,900 employees from last year. Insurance carriers, agents, and brokers gained 1,800, and real estate rose 600.

There was little change in the service industries from last month. Amusement and recreation services was up by 1,000 from last month, a seasonal increase. This gain was almost entirely offset by a decline of 900 in personal services. The drop was also seasonal, occurring in income tax services.

Service industries continued to grow over the year with nearly all sectors contributing to the increase. As has been the case for some time, the primary gainers were business services and health services.

Government employment rose substantially from both reference periods. Most of the monthly gain was in federal government, the result of increased hiring of enumerators for the 1990 decennial census. The annual gain was more equally shared among the federal, state, and local groups. Only federal defense lost employment from last year.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 6
(June 1990 data)

Growth Continues at Slower Pace

Georgia's nonagricultural wage and salary employment totalled 3,021,400 in June, an increase of 5,400 from May and 69,300 more than in June 1989. The goods-producing industries gained 2,000 from last month, and the service-producing industries rose 3,400. All of the annual increase occurred in the service-producing industries. The goods-producing sector lost 5,300, most of it in manufacturing.

Contract construction increased by 1,500 over the month, but dropped 700 over the year. General building rose 700 from May and 2,200 from last year. Heavy construction went up 300 from last month, while declining 500 from June 1989. Special trades contracting was up 500 from May and down 2,400 on an annual basis.

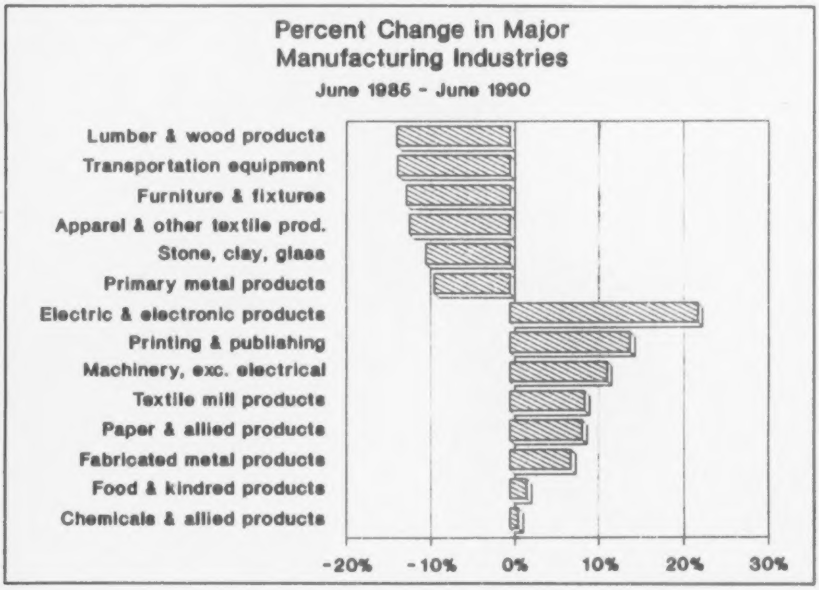
Manufacturing employment grew overall by an anemic 500 from May. Most of the changes were minor fluctuations of little note. Employment in meat products went down 700, almost entirely because a manufacturer of poultry and meat products shut down temporarily to install new equipment.

Textile products rose 600 from May, 400 of it in synthetic weaving mills. This increase took place because employees of a large manufacturer of man-made fabrics were recalled from a temporary layoff.

Over-the-year losses in textile mill and apparel products were equal to the net loss in the division. Cotton weaving mills and all sectors of the apparel industry were the big losers.

Although employment in the manufacture of transportation equip-

Continued



New Developments

Circuit City Stores Inc. plans to open its own national credit operation in Atlanta this fall, according to a recent announcement. The company is ending an agreement with Barclays Bank of Delaware, which has been handling Circuit City's credit services. A company spokesman said that Atlanta was chosen because the company's Southern division office is already located here. The new operation will employ 50 people initially.

Campbell Soup Company has announced plans to divest itself of its fresh foods and produce business, including a facility in Dudley, Georgia. The restructuring affects 3,000 jobs nationwide and about 200 in Georgia.

Growth Continues at Slower Pace

Continued from page 1

ment shows little change from either reference period, it is worth noting that most of the workers who were placed on temporary layoff from one large automobile manufacturer in 1989 have now been placed on indefinite layoff.

Employment in transportation and public utilities rose 900 from last month and 6,800 from June 1989. Most of the increase was directly attributable to developments at a major airline which has a large presence in the Atlanta market. Because of a strike which began in March of 1989, employment last June was only about a fifth of before-strike levels. Under the attempted restructuring, employment has returned to about 95 percent of prestrike status.

Wholesale and retail trade continued to grow from both reference periods. Most of the monthly growth occurred in the retail sector, but the annual increase was shared in good measure by the wholesale sector as well. Despite the fact that significant gains have occurred from both reference periods, the rate of growth has slowed dramatically. From 1985 to 1989, the average increment from May to June was 5,100 and the average June-to-June growth during the same years was 27,400.

Normal seasonal gains in finance, insurance, and real estate sent that division up 900 over the month. Annually, it rose 300. A sizeable gain in insurance was completely offset by an identical loss in financial institutions.

Service employment rose 2,400 from last month and 25,200 from last year. Amusements and recreational facilities gained 1,100 from May, a normal seasonal fluctuation. Business services, which has trended upward for some time, experienced a decline of 1,100 this month, the result of declines in temporary employment agencies.

Government employment dropped 2,500 from last month, 1,700 of the decrement in federal government because the Census Bureau released some people who were hired temporarily for the decennial enumeration of the population. Declines in state and local education were normal seasonal drops. Gains in other sectors of state and local government were all seasonal, as some agencies add temporary summer workers.

GEORGIA LABOR MARKET TRENDS

VOLUME XVI, NUMBER 7
(July 1990 data)

Employment Drops in July

Georgia's nonagricultural wage and salary employment dropped 15,400 from June. The majority of the loss was seasonal, the result of the end of the school year and customary vacation closings in some manufacturing plants. Employees who are on paid vacation during the closings are counted as employed for the month; those not qualifying for vacation pay are considered to be on temporary layoff for the period.

Construction employment rose by 1,800 from June, while declining 800 from July 1989. General building went up 900 over the month and 2,300 over the year. Heavy construction increased 200 from last month, but declined 400 from last year. Special trades contracting rose 600 from June and went down 2,700 from last year.

Manufacturing decreased both over the month and over the year with the losses split between durable and nondurable goods.

Textiles and apparel were the big losers from both reference periods. Although a part of the monthly decline was caused by vacation closings, a significant portion was caused by decreased production because of a lack of orders. Broadwoven fabric mills and men's and boys' clothing manufacturers were especially hard hit.

Another seasonal decline occurred in nonelectrical machinery. Fewer lawn and garden tractors and other home garden tools are being made at this time of year.

Employment in meat products rose 700 this month. Nearly all of the increase was caused by a recall from layoff at one large poultry processing plant.

The service-producing industries declined from last month with most of the losses occurring in government, another normal seasonal occurrence. This group of industries

Continued

New Developments

Quick 'n Easy Stores, an Austell-based chain, filed for bankruptcy protection under Chapter 11 recently. The company operates 22 convenience stores in the Atlanta area. It becomes the third Atlanta-area convenience store chain to file for bankruptcy this year. Munford, Inc., which operates Majik Markets, and Circle K Corporation are currently trying to reorganize. A spokesman for Quick 'n Easy said that none of the company's 110 employees will be laid off immediately.

The other shoe has finally fallen. The long-expected closing of **General Motors' Lakewood Assembly Plant** is now a reality, and 2,200 employees are out of work. A company spokesman said that the 62-year-old plant will be maintained for an indeterminate period in such a way that it can be reactivated if GM decides to resume production. No one expects that to occur, however, and the company itself stresses that there are no current plans to do so.

Leeds Building Products Inc., a new company, will have its corporate headquarters in Atlanta, according to its president and chief executive officer. Leeds recently completed the purchase of 37 sales and service centers from Wickes Lumber Company. The company currently has seven stores and one service facility in Georgia and employs about 200 people in the state. The headquarters will eventually employ about 40 people.

Ford Motor Company has announced a one-week shutdown of its Hapeville assembly plant because of a slowdown in orders from dealers. The factory employs about 2,500 people.

Employment Drops in July

Continued from page 1

grew handsomely from last year, and almost every segment contributed to the advance.

Transportation and public utilities rose 900 from last month and 6,100 from last year. Nearly half the monthly gain and a larger proportion of the yearly increase occurred because of increased activity in airplane transportation.

Retail trade employment went up 2,100 from June and 10,000 from last year. The monthly increase was shared by most segments, but eating and drinking places accounted for more than 80 percent of the annual gain.

Overall, finance, insurance, and real estate dropped 500 from last year. Financial institutions recorded a decline of 2,300, however, while insurance agencies and brokers employed an additional 1,900 people.

Employment in the service industries was down this month, most of it in temporary help agencies. Annually, employment grew in nearly every segment, up a total of 22,800.

Government recorded its usual steep July decline, most of it in state and local education. Nine-month employees were furloughed for the summer. There will be a concomitant rise in government employment when schools resume in the fall. Federal government employment dropped 1,000 because fewer people are being employed by the census bureau. Some 5,000 remain on federal payrolls in Georgia to complete the 1990 census.

New Developments

Continued from page 1

William L. Bonnell Company, of Newnan will lay off between 300 and 400 people by the end of the year as part of a restructuring plan. The company is a subsidiary of Tredegar Industries Inc., which owns two other facilities, one in Tennessee and one in Indiana. The Newnan facility makes aluminum extrusions for aluminum windows, doors, tub and shower enclosures and marine trim. Presently, some 1,100 people are employed.

West Point-Pepperell Inc. announced the layoff of 120 people at its Valley, Alabama, manufacturing plant. Valley is just across the state line from Columbus, Georgia. A company spokesman blamed poor sales for the work force reduction. It is not known at this time how many Georgia residents were among those losing their jobs.

AWS Corporation of Albany is building an expanded manufacturing facility which will increase its size from 13,000 square feet to 21,000 square feet immediately and to 60,000 square feet next year. The company manufactures machinery used in automobile engine repair shops. The expansion will double the number of employees to 30. Production at the new site should begin in late September.

Oxford Industries Inc. will discontinue its Cos Cob and JBJ sportswear lines and close a service center and distribution center in Atlanta, a move that will cost 85 people their jobs. Five Oxford manufacturing plants that previously made the clothing lines will now produce other types of women's wear.
